SUMMARY

AI developer who builds and runs LLM systems in production. For 8 months at an AI ad-tech startup I have built multi-model pipelines, tool-calling agents and custom integrations. I focus on making AI reliable: evaluation, measured output checks, guardrails in code and human approval before risky actions. B.Tech CSE (AI & ML).

EXPERIENCE

AI Developer & Designer, Nativize (AI-native ad-tech startup) Feb 2026 – Present

- **Agentic AI assistant.** An LLM agent with tool calling and memory that the team uses for campaign reporting, research and ad copy. Risky actions (budget changes, pausing, going live) need explicit human approval, an action is reported as done only when the tool confirms it, and every call is logged.
- **Content generation pipeline.** A product URL becomes marketing angles, an advertorial, images and video, with work routed across Claude, Gemini, OpenAI and Veo, automatic fallback when a provider fails, and video generated as durable background jobs that survive failures.
- **Evaluation and quality.** A ~500-case regression suite and measured checks on AI output, so prompt and model changes cannot silently lower quality.
- **Custom integrations.** Campaign publishing through ad platform APIs (created paused, safe to retry) and a rules engine for CPA/ROAS-based actions with dry-run mode, daily caps and audit logs.
- **Security.** Role-based access and Row Level Security across the database.

Creative Designer, Means Design, Dubai, UAE Sep 2025 – Jan 2026

- Designed brand campaigns for 15+ hospitality clients in a 5-person team, delivering 100+ on-brand assets on deadline.

UI Designer (Part-time), Webcurve, Kochi Mar 2024 – Dec 2024

- Designed 50+ Figma screens and components, working directly with engineers.

PROJECTS

Quant Suggest: AI agent for trading-strategy research Python, FastAPI, Next.js, PostgreSQL

- Claude turns a plain-English idea into a validated spec and generates code limited to verified methods; a backtest runs only after a scenario check and up to 3 automatic repair attempts.
- My own backtest engine, cross-checked against LEAN (19 of 20 trades matched, ~4 s vs ~90 s), with drawdown and overfitting tests; 640+ automated tests.

ClinicDesk: grounded multi-branch assistant Python, FastAPI, Claude

- Answers only from the correct branch's information with citations, screens for prompt injection and hands off to a human when unsure; 0 cross-branch leaks across 91 tested cases.

SMS lead qualification agent Python, FastAPI, Claude, n8n

- The LLM only extracts facts; deterministic code decides and only pre-written templates are sent. 54/54 scripted conversations pass, including prompt-injection and edge cases.

SKILLS

LLMs & agents: Claude, OpenAI and Gemini APIs, tool calling, structured outputs, multi-model routing and fallback, human-in-the-loop approval, prompt engineering
Evaluation: regression test suites, measured output checks, grounded answers with citations
Backend: Python, FastAPI, TypeScript, Node/Express, PostgreSQL, Docker, GitHub Actions, n8n
Integrations: Google Ads, Meta, Taboola and GoHighLevel APIs · **Languages:** English, Malayalam, Arabic

EDUCATION

B.Tech, Computer Science & Engineering (AI & ML), Sree Buddha College of Engineering · CGPA 8.38 2021 – 2025
