SUMMARY

AI developer who builds and runs LLM systems in production. For 8 months at an AI ad-tech startup I have built multi-model agent pipelines, tool-calling agents that act on live business systems, and custom integrations across ad and marketing platforms. I focus on making AI reliable: evaluation suites, measured output checks, guardrails in code and human approval before risky actions. B.Tech CSE (AI & ML).

EXPERIENCE

AI Developer & Designer, Nativize (AI-native ad-tech startup) Feb 2026 – Present

- **Agentic AI assistant (current).** An LLM agent with tool calling and persistent memory, used by the team for campaign reporting and changes, market research, compliant ad copy and video editing. Risky actions (budget changes, pausing, going live) are restricted to authorised users and run only after explicit human approval.
- **Guardrails against hallucinated actions.** The agent may only report an action as done when the tool confirms it; confirmation steps are enforced in code, not left to the model; every tool call and error is logged. Spend caps reserve API units before each call so parallel requests cannot overshoot.
- **AI video factory.** Script → Veo video clips → assembly → automated quality check, run as durable background jobs that survive restarts and retries.
- **Content generation pipeline.** A product URL becomes marketing angles, a full advertorial, images and video, with tasks routed by model (Claude for copy and strategy, Gemini for images with OpenAI as automatic fallback, Veo for video) and structured outputs throughout.
- **Evaluation and quality.** ~500-case regression suite; production prompts (e.g. a Meta ad copywriter) whose outputs are audited with measured checks, so prompt and model changes cannot silently lower quality.
- **Custom integrations.** End-to-end campaign publishing through ad platform APIs (created paused, safe to retry) and a rules engine for CPA/ROAS-based actions with dry-run, daily caps and audit logs.
- **Security and reliability.** Row Level Security on 39 tables, secret rotation and server hardening, CI deploys, and failure classification that halts a batch cleanly when a provider fails.

Creative Designer, Means Design, Dubai, UAE Sep 2025 – Jan 2026

- Designed brand campaigns for 15+ hospitality clients in a 5-person team, delivering 100+ on-brand assets on deadline.

UI Designer (Part-time), Webcurve, Kochi Mar 2024 – Dec 2024

- Designed 50+ Figma screens and components, working directly with engineers.

PROJECTS

Quant Suggest: agentic AI platform for trading-strategy research Python, FastAPI, Next.js, PostgreSQL

- Claude extracts a structured spec from plain English (asking follow-ups for missing fields), generates code restricted to a whitelist of verified methods, then passes a scenario gate and up to 3 automatic repair attempts before any run.
- Research rigour: in-house backtest engine cross-checked against LEAN (19 of 20 trades matched, ~4 s vs ~90 s), Monte Carlo drawdown bootstrap, probability of backtest overfitting (CSCV), regime classifier re-labelled out-of-sample to remove look-ahead bias; CI over 640+ tests.

ClinicDesk: grounded multi-location assistant Python, FastAPI, Claude

- Classifies each request, answers only from the correct branch's information with citations, screens for prompt injection and hands off to a human when unsure; evaluation suite on every change, 0 cross-branch leaks across 91 tested cases.

SMS lead qualification agent Python, FastAPI, Claude, n8n

- The LLM only extracts facts (validated with Pydantic); deterministic code decides and only pre-written templates are sent. 54/54 scripted conversations pass, including prompt-injection and edge cases; idempotent webhooks and spend caps.

SKILLS

LLMs & agents: Claude, OpenAI and Gemini APIs, tool calling, structured outputs (Pydantic), multi-model routing and fallback, agent memory, human-in-the-loop gates, prompt engineering, LangChain, Hugging Face

RAG & evaluation: embeddings, vector search (Chroma), grounded answers with citations, golden-dataset evals, regression testing, LLM output audits

Machine learning: CNN-LSTM model for engagement detection (B.Tech project), PyTorch, TensorFlow/Keras, scikit-learn, XGBoost, OpenCV, pandas/NumPy

Backend & DevOps: Python, FastAPI, TypeScript, Node/Express, PostgreSQL, Docker, GitHub Actions CI/CD, n8n, Sentry

Custom integrations: Google Ads, Meta Marketing, Taboola, Semrush and GoHighLevel APIs · **Languages:** English, Malayalam, Arabic

EDUCATION

B.Tech, Computer Science & Engineering (AI & ML), Sree Buddha College of Engineering · CGPA 8.38 2021 – 2025
